

Operating System project report

Team work:

section 3 group 3 :

- Maria Ezat
- Marina Ehab
- Mary Kamal

-In our project we have five classes (Mini-FAT , VirtualDisk , Directory , Directory_Entry , FileEntry , program(contains class commands))

1. Mini-FAT :

We have 9 methods in this class

- `Constructor`
- `prepareFat`:to initialize the content of clusters in mini fat
- `write_fat_table`:to write in fat clusters
- `get_Fat_Table`: to read fat clusters
- `print_Fat_Table` : to print the fat table
- `get_empty_cluster`: to show each empty cluster in the fat table
- `get_empty_clusters`: to return the index of each empty cluster in the fat table
- `set_cluster_status`: to change the value of specific index
- `get_cluster_status`: to get the value of specific index

2. VirtualDisk :

We have 4 methods in this class

- `Intialize`: Make sure that if the file is present or not, if it is not there, then create it, but if it is, read the files inside it
- `write_cluster`:

- `read_cluster:`
- `getFreeSpace:` get the remaining free space of disk

3. Directory :

We have 14 methods in this class

- `Constructor`
- `WriteDirectory:` to write in the directory
- `ReadDirectory:` to read from the directory
- `updateContent:` to update new item in this directory in specific index
- `GetDirectory_Entry :` to get information about the directory
- `deleteDirectory:` to delete the directory
- `searchDirectory:` to search about specific directory or file in the directory
- `GetEntrySize:` to return the “ ?? ” size
- `get_size_on_Disk :`
- `Can_add_Entry:` if we can add a file or directory to this directory
- `updateInfo:` replace the old directory /file by new one
- `RemoveEntry:` to delete specific file or directory in that directory
- `addEntry:` to add new file or directory in the directory
- `EmptymyCluster:`

4. Directory_Entry :

We have 3 methods in this class

`constructor`

`getbytes:`

`Get_Directory_Entry :`

5. FileEntry :

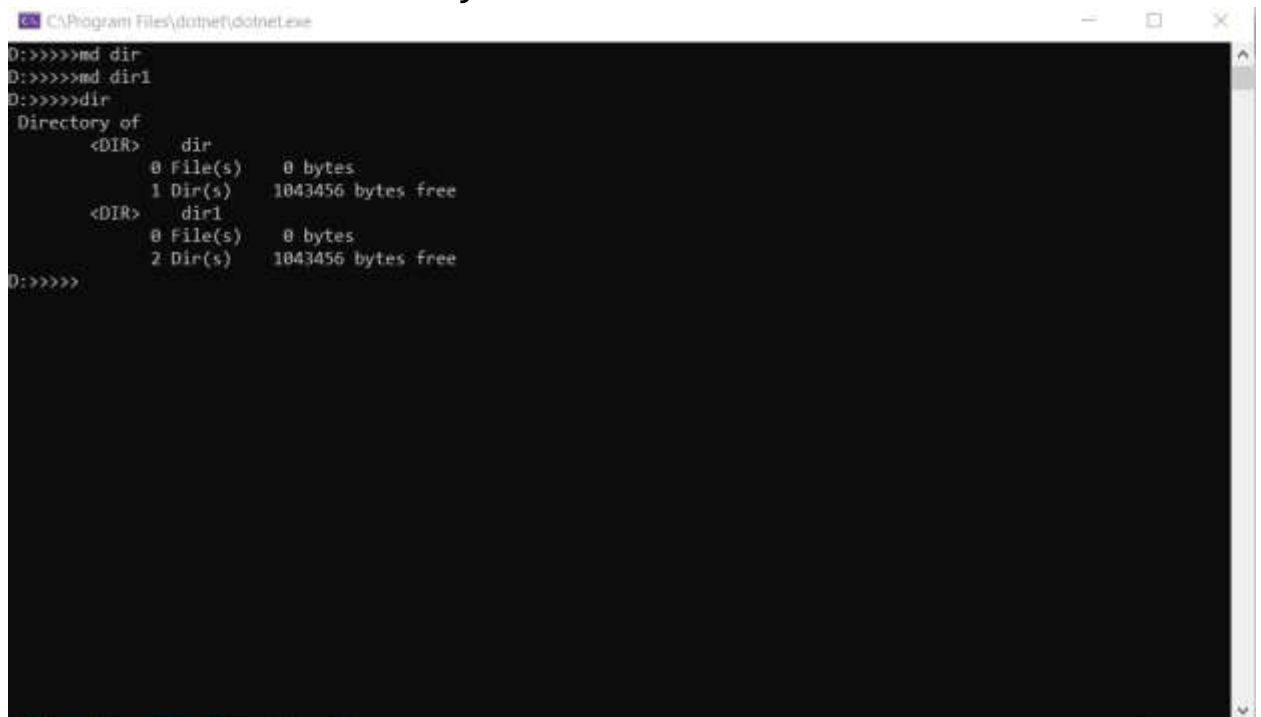

We have 8 methods in this class

- `Constructor`
- `printFileContent`: to print the content of the file
- `GetDirectory_Entry : :` to get information about the directory
- `get_size_on_Disk :`
- `EmptymyCluster`:
- `WriteFileContent`: to write in the file
- `ReadFileContent`: to read from file
- `deleteFile`: to delete file

6. Program :

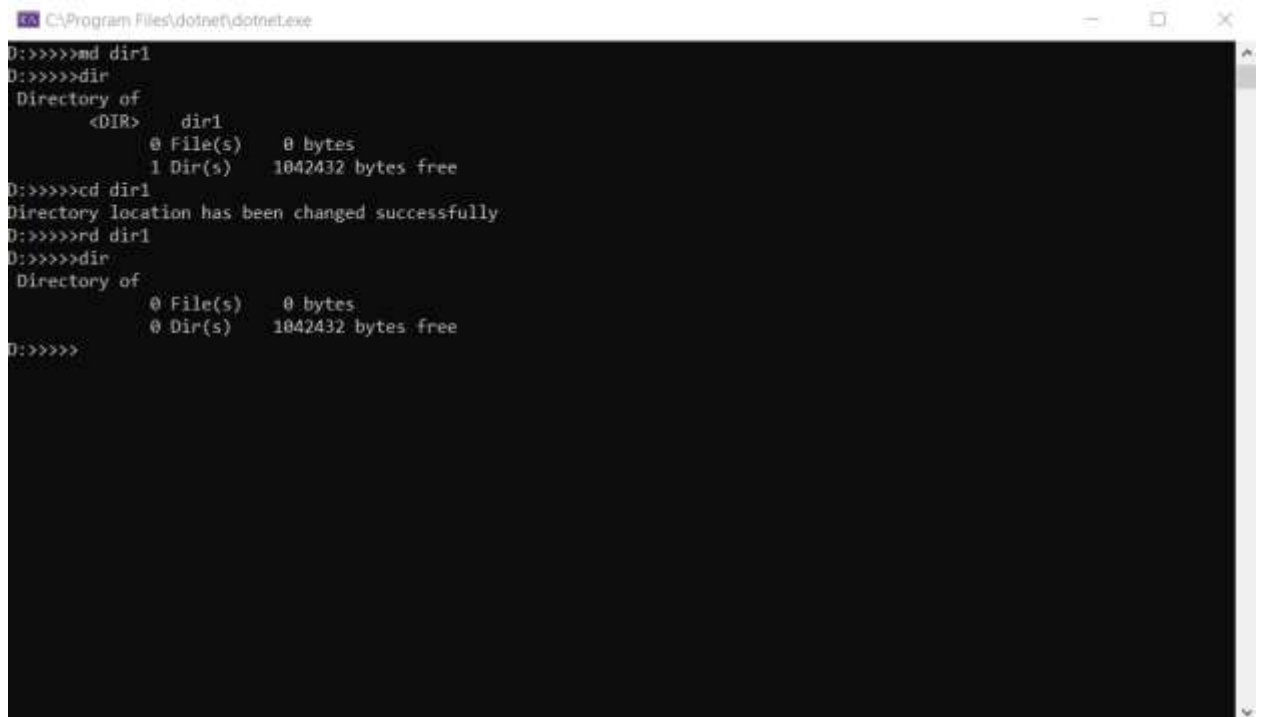

We have 13 methods in this class

- `Md`: Creates a directory.

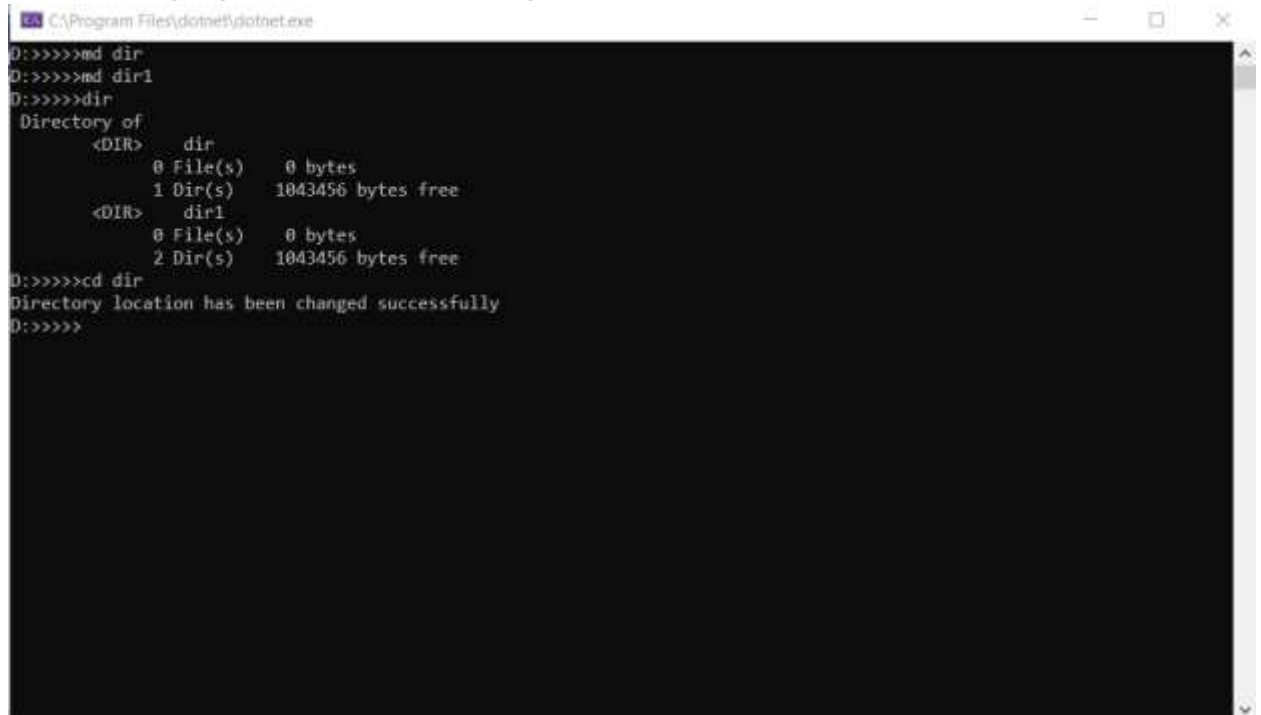

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>md dir
D:>>>>>md dir1
D:>>>>>dir
Directory of
<DIR>      dir
            0 File(s)    0 bytes
            1 Dir(s)    1043456 bytes free
<DIR>      dir1
            0 File(s)    0 bytes
            2 Dir(s)    1043456 bytes free
D:>>>>>
```

- **Rd:** Removes a directory.

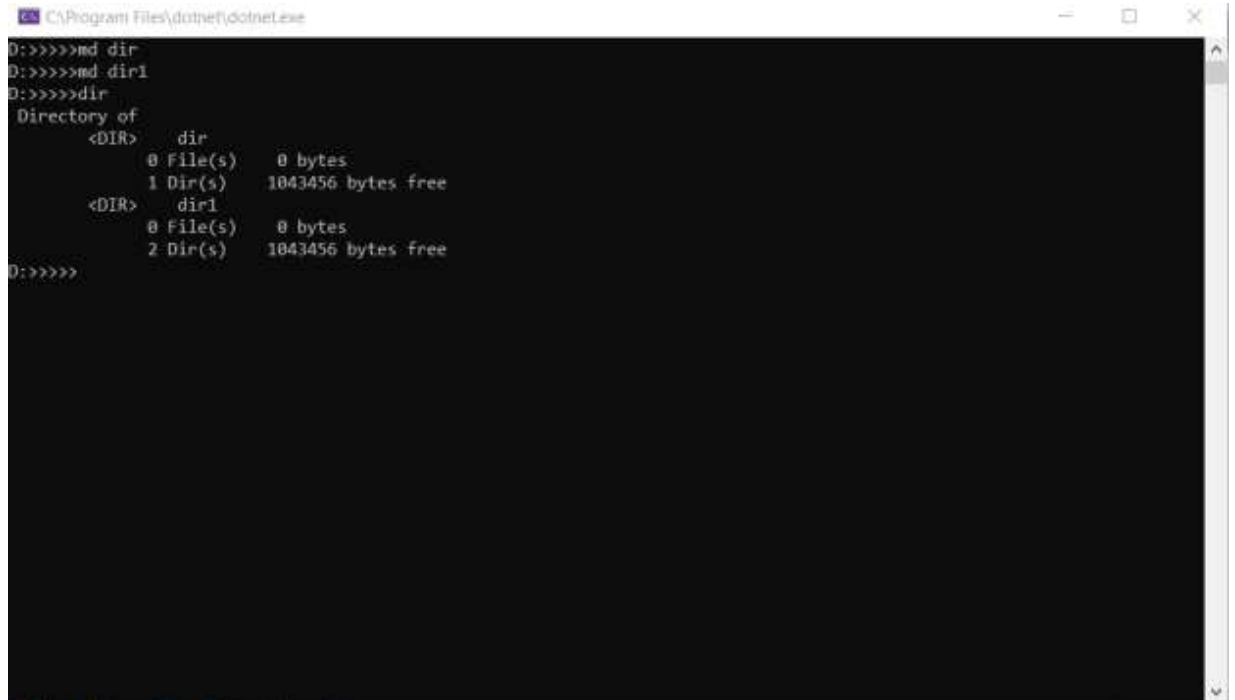

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>md dir1
D:>>>>>dir
Directory of
<DIR>      dir1
            0 File(s)    0 bytes
            1 Dir(s)    1042432 bytes free
D:>>>>>cd dir1
Directory location has been changed successfully
D:>>>>>rd dir1
D:>>>>>dir
Directory of
            0 File(s)    0 bytes
            0 Dir(s)    1042432 bytes free
D:>>>>>
```

- **Cd:** Change the current default directory to the directory given in the argument.

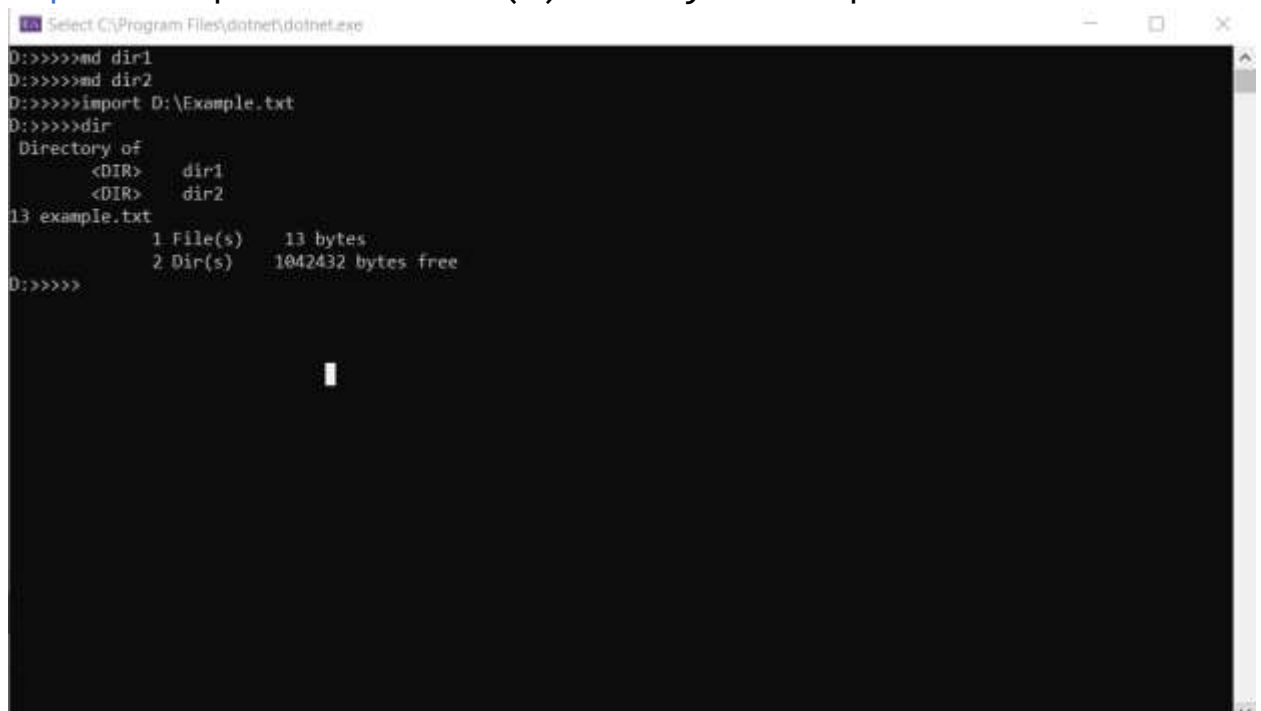

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>md dir
D:>>>>>md dir1
D:>>>>>dir
Directory of
<DIR>      dir
            0 File(s)    0 bytes
            1 Dir(s)    1043456 bytes free
            <DIR>      dir1
            0 File(s)    0 bytes
            2 Dir(s)    1043456 bytes free
D:>>>>>cd dir
Directory location has been changed successfully
D:>>>>>
```

- **Dir:** List the contents of directory given in the argument. If the argument is not present, list the content of the current directory. If the directory does not exist an appropriate error should be reported.

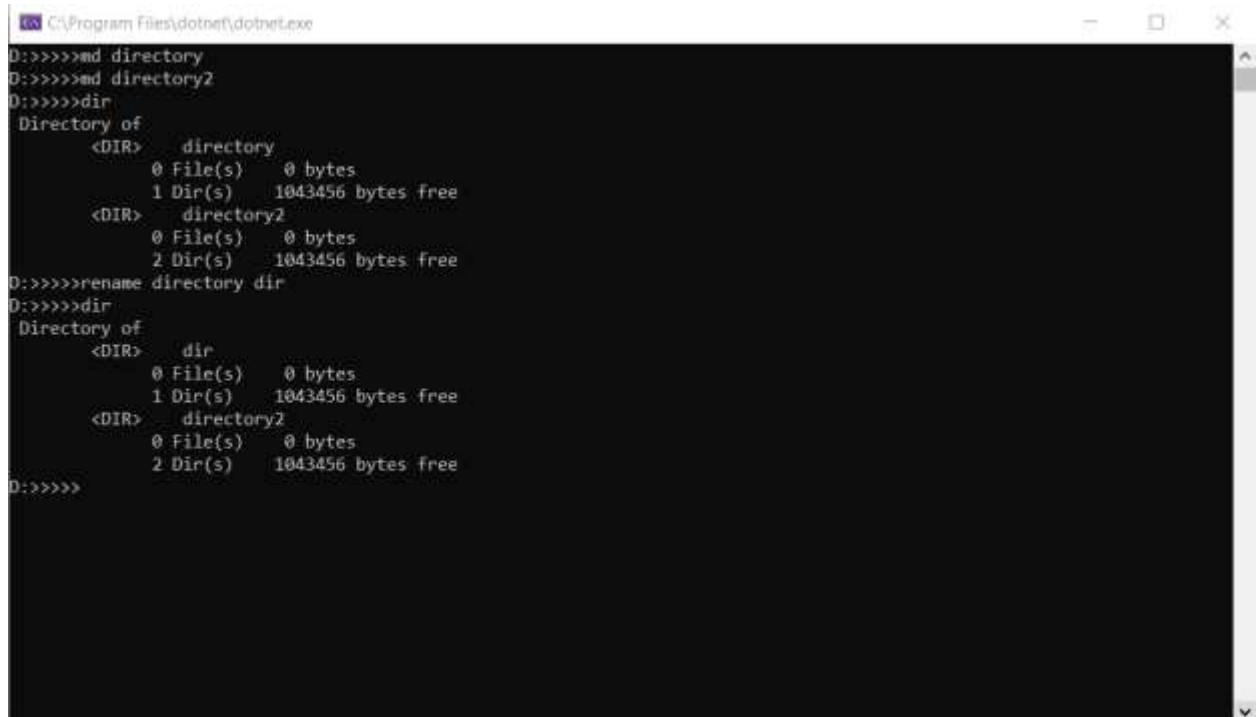

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>md dir
D:>>>>>md dir1
D:>>>>>dir
Directory of
<DIR>    dir
          0 File(s)    0 bytes
          1 Dir(s)    1043456 bytes free
<DIR>    dir1
          0 File(s)    0 bytes
          2 Dir(s)    1043456 bytes free
D:>>>>>
```

- **Import:** import text file(s) from your computer.

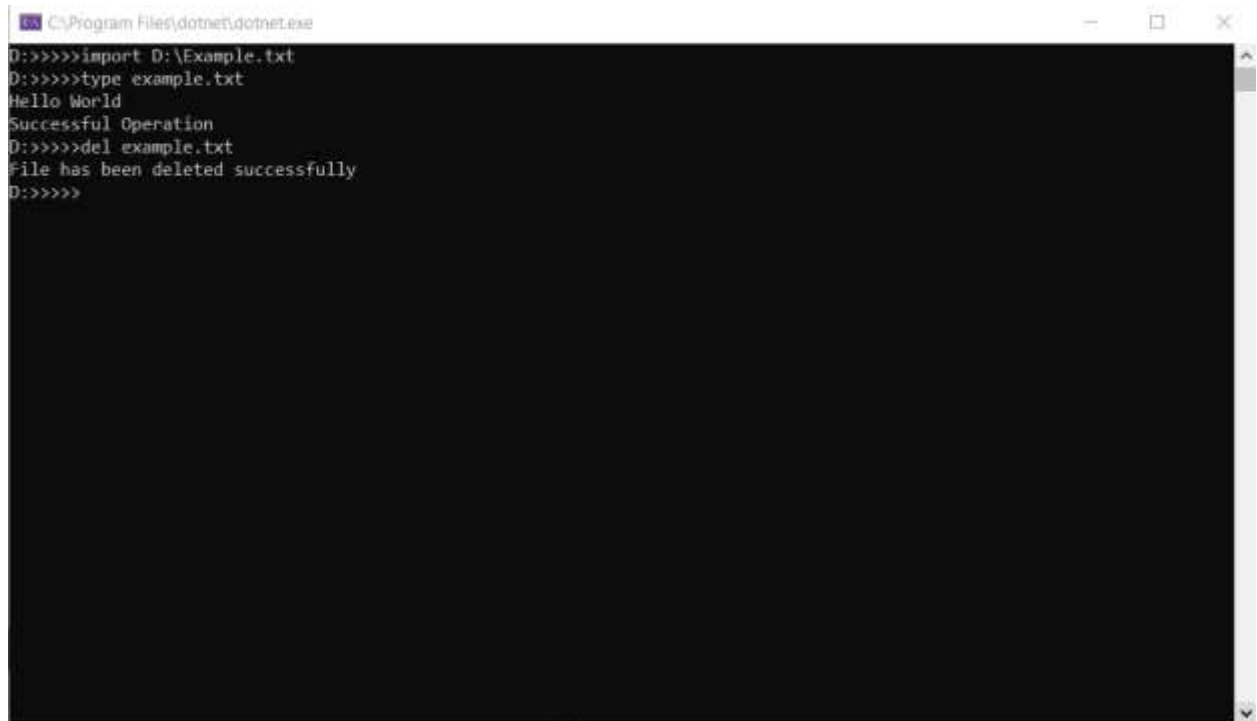

```
Select C:\Program Files\dotnet\dotnet.exe
D:>>>>>md dir1
D:>>>>>md dir2
D:>>>>>import D:\Example.txt
D:>>>>>dir
Directory of
<DIR>    dir1
<DIR>    dir2
13 example.txt
          1 File(s)    13 bytes
          2 Dir(s)    1042432 bytes free
D:>>>>>
```

- **Rename:** Renames a file.

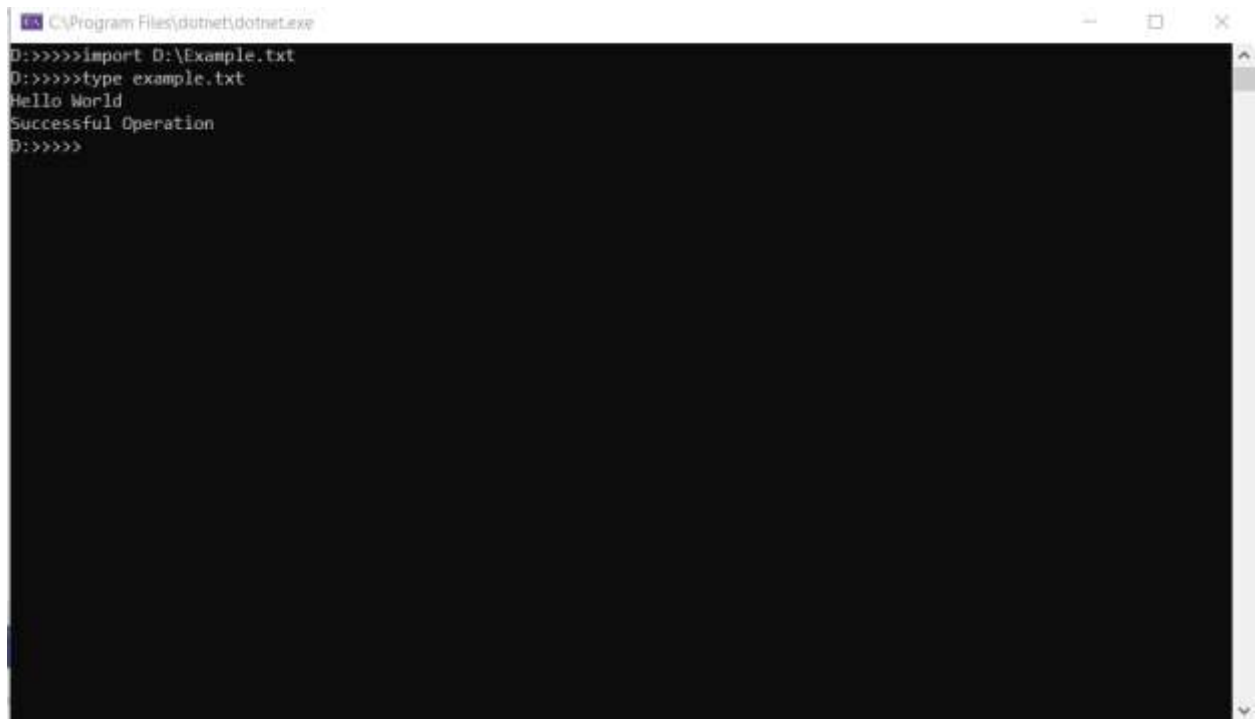

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>md directory
D:>>>>>md directory2
D:>>>>>dir
Directory of
<DIR>    directory
         0 File(s)    0 bytes
         1 Dir(s)    1043456 bytes free
<DIR>    directory2
         0 File(s)    0 bytes
         2 Dir(s)    1043456 bytes free
D:>>>>>rename directory dir
D:>>>>>dir
Directory of
<DIR>    dir
         0 File(s)    0 bytes
         1 Dir(s)    1043456 bytes free
<DIR>    directory2
         0 File(s)    0 bytes
         2 Dir(s)    1043456 bytes free
D:>>>>>
```

- **Del:** Deletes one or more files.

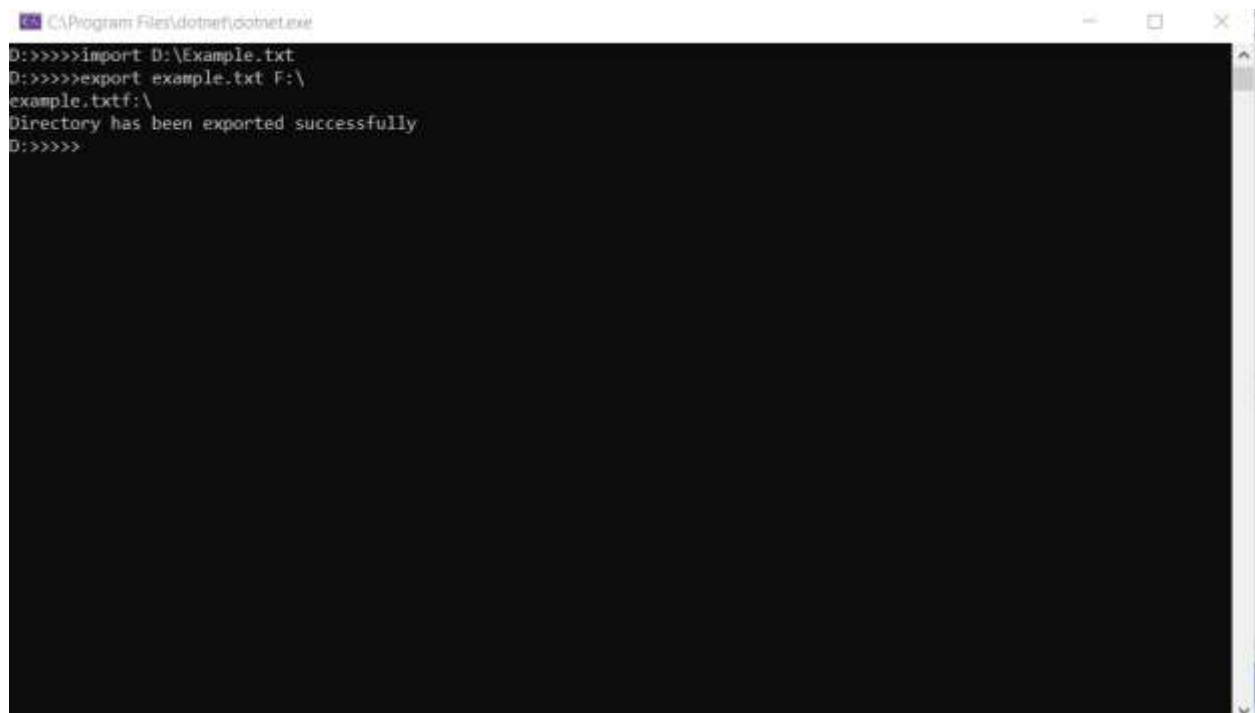

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>import D:\Example.txt
D:>>>>>type example.txt
Hello World
Successful Operation
D:>>>>>del example.txt
File has been deleted successfully
D:>>>>>
```

- **Type:** Displays the contents of a text file.

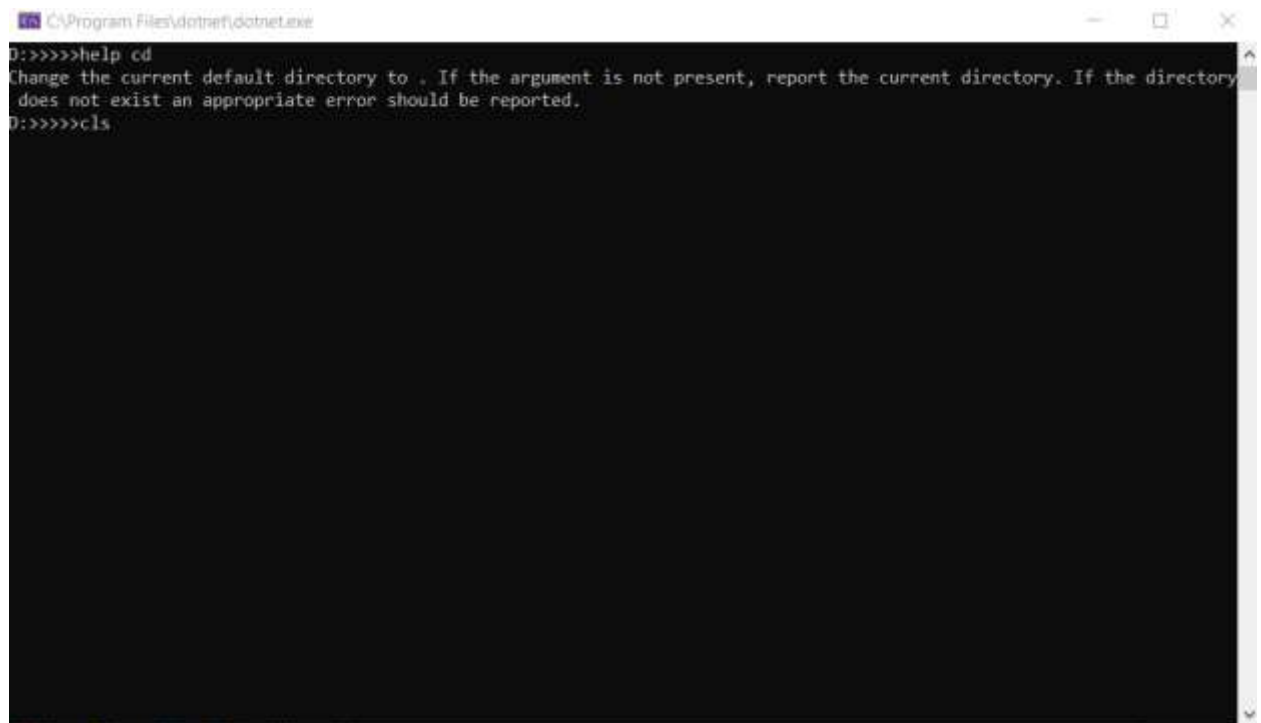

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>import D:\Example.txt
D:>>>>>type example.txt
Hello World
Successful Operation
D:>>>>>
```

- **Export:** export text file(s) to your computer.

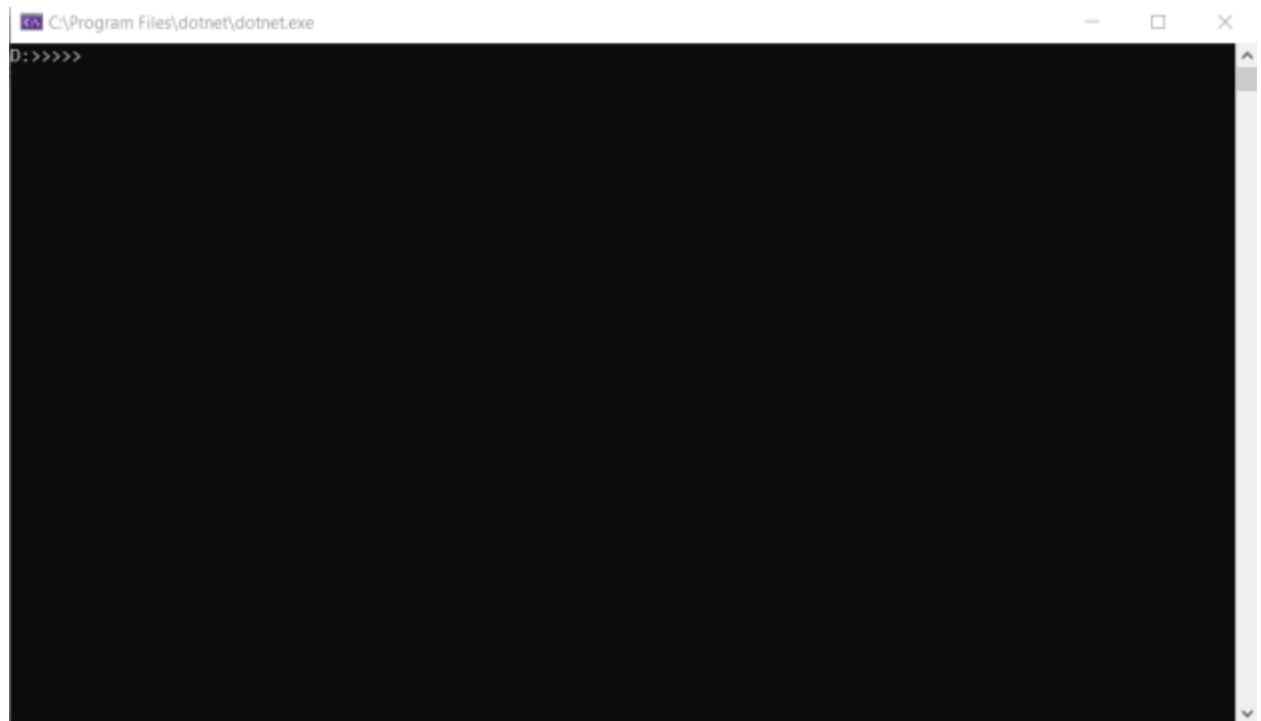

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>import D:\Example.txt
D:>>>>>export example.txt F:\
example.txtf:\
Directory has been exported successfully
D:>>>>>
```

- **Cls:** Clear the screen.

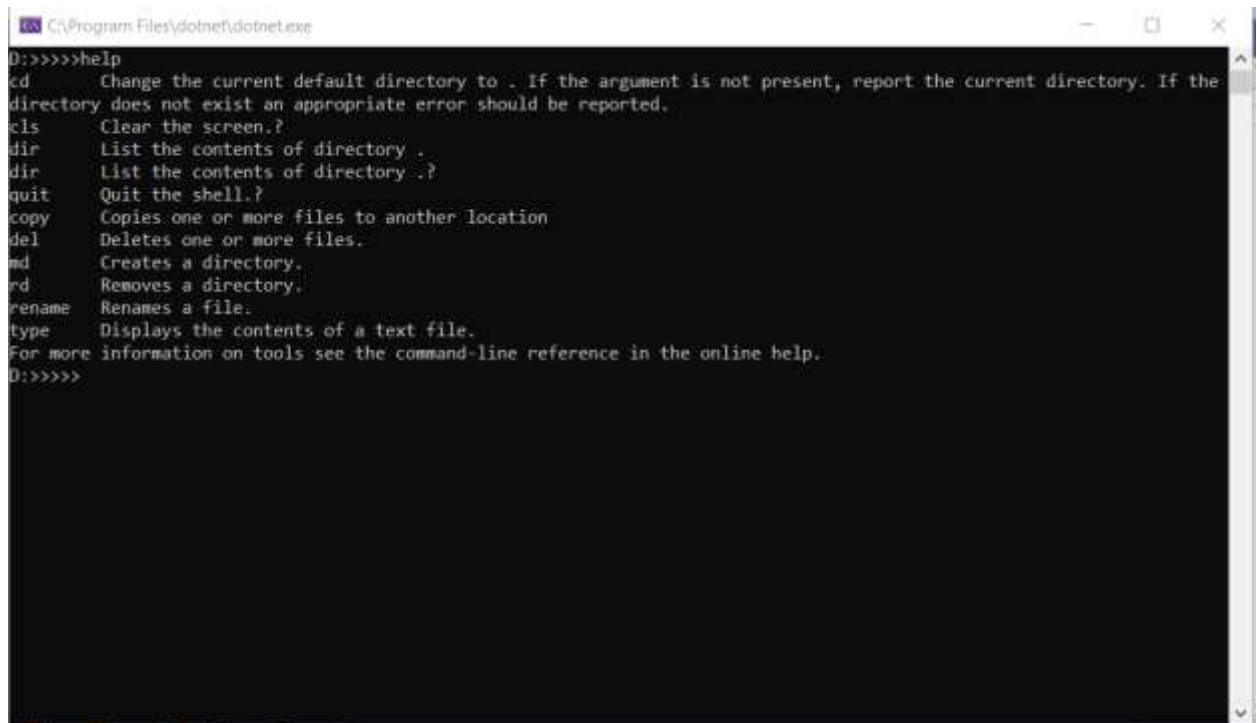

```
C:\Program Files\dotnet\dotnet.exe
D:\>>>>>help cd
Change the current default directory to . If the argument is not present, report the current directory. If the directory
does not exist an appropriate error should be reported.
D:\>>>>>cls
```

After run

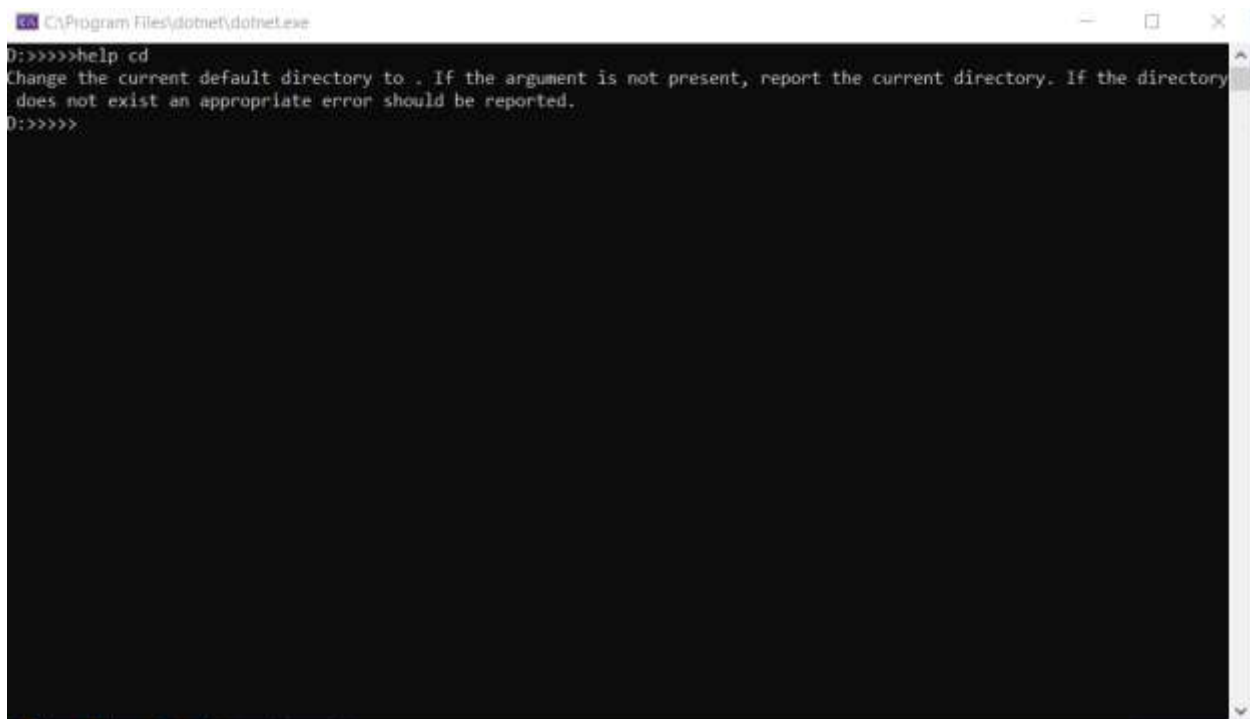

```
C:\Program Files\dotnet\dotnet.exe
D:\>>>>>
```

- **Help:** Provides Help information for commands.

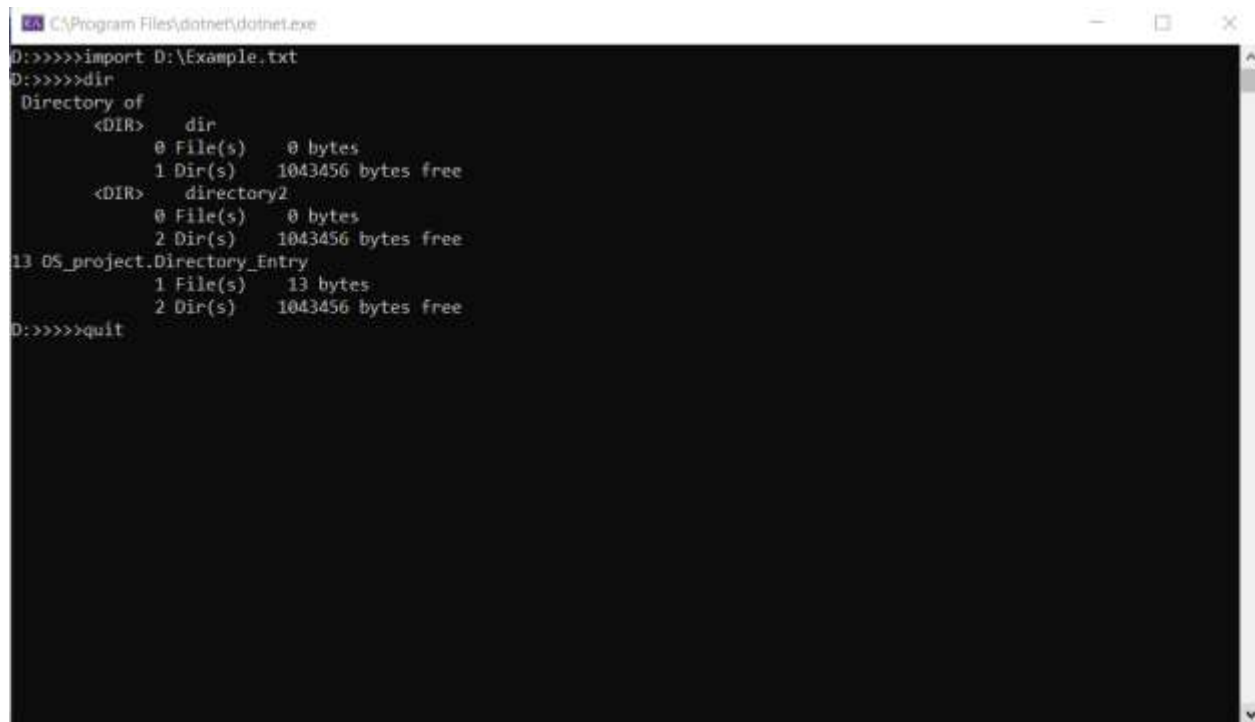

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>help
cd      Change the current default directory to . If the argument is not present, report the current directory. If the
        directory does not exist an appropriate error should be reported.
cls     Clear the screen.?
dir     List the contents of directory .
dir     List the contents of directory .?
quit    Quit the shell.?
copy    Copies one or more files to another location
del     Deletes one or more files.
md      Creates a directory.
rd      Removes a directory.
rename  Renames a file.
type    Displays the contents of a text file.
For more information on tools see the command-line reference in the online help.
D:>>>>>
```

- **Help with an argument:** Display with details the information about that command and how to use it

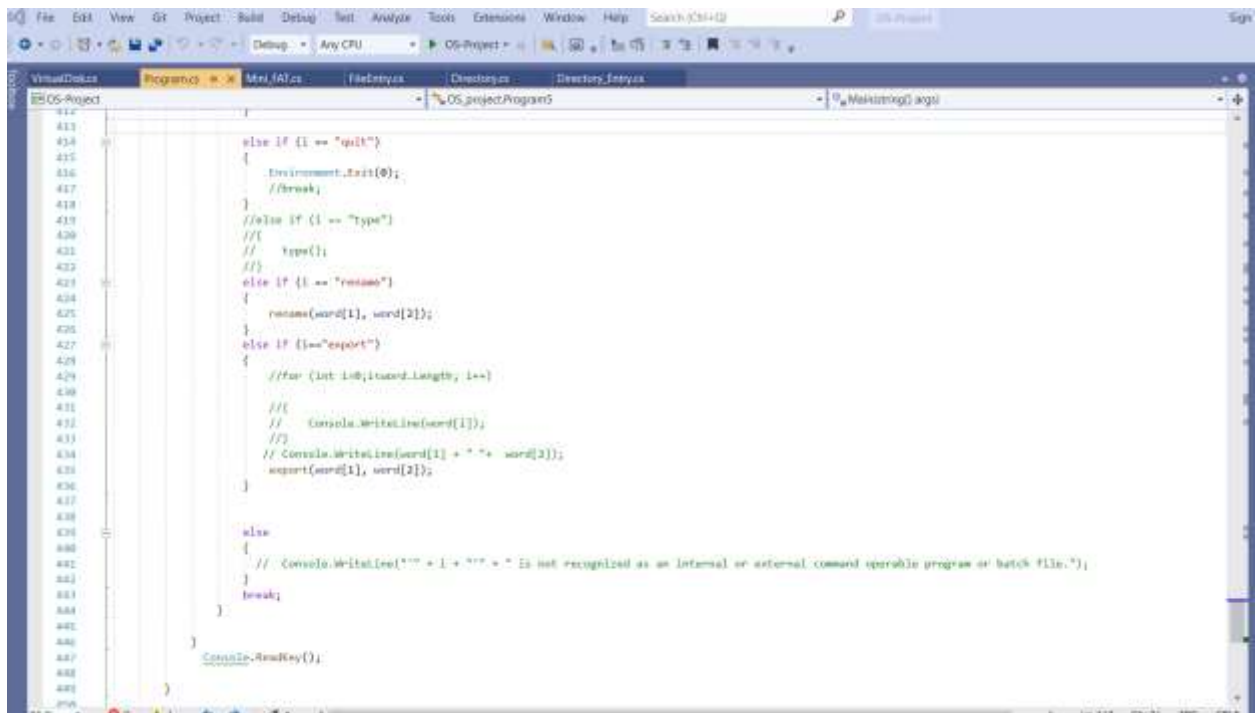

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>help cd
Change the current default directory to . If the argument is not present, report the current directory. If the directory
does not exist an appropriate error should be reported.
D:>>>>>
```

Quit: Quit the shell.

```
C:\Program Files\dotnet\dotnet.exe
D:>>>>>import D:\Example.txt
D:>>>>>dir
Directory of
<DIR>    dir
          0 File(s)    0 bytes
          1 Dir(s)    1043456 bytes free
<DIR>    directory2
          0 File(s)    0 bytes
          2 Dir(s)    1043456 bytes free
13 OS_project.Directory_Entry
          1 File(s)    13 bytes
          2 Dir(s)    1043456 bytes free
D:>>>>>quit
```

After run

```
411  
412  
413     else if (l == "quit")  
414     {  
415         Environment.Exit(0);  
416         //break;  
417     }  
418  
419     //else if (l == "type")  
420     //{  
421     //    type();  
422     //}  
423  
424     else if (l == "rename")  
425     {  
426         rename(word[1], word[2]);  
427     }  
428  
429     else if (l == "export")  
430     {  
431         //for (int i=0; i<word.Length; i++)  
432         //{  
433             Console.WriteLine(word[i]);  
434             //}  
435         // Console.WriteLine(word[1] + " " + word[2]);  
436         export(word[1], word[2]);  
437     }  
438  
439     else  
440     {  
441         // Console.WriteLine("'" + l + "'" + " is not recognized as an internal or external command, operable program or batch file.");  
442     }  
443     break;  
444 }  
445  
446 }  
447  
448 Console.ReadKey();  
449  
450 }
```

- **Copy:** Copies one or more files to another location.
